3CX Install with IP Auth SIP Trunk for QuestBlue

Follow the prompts below to complete an install of 3CX
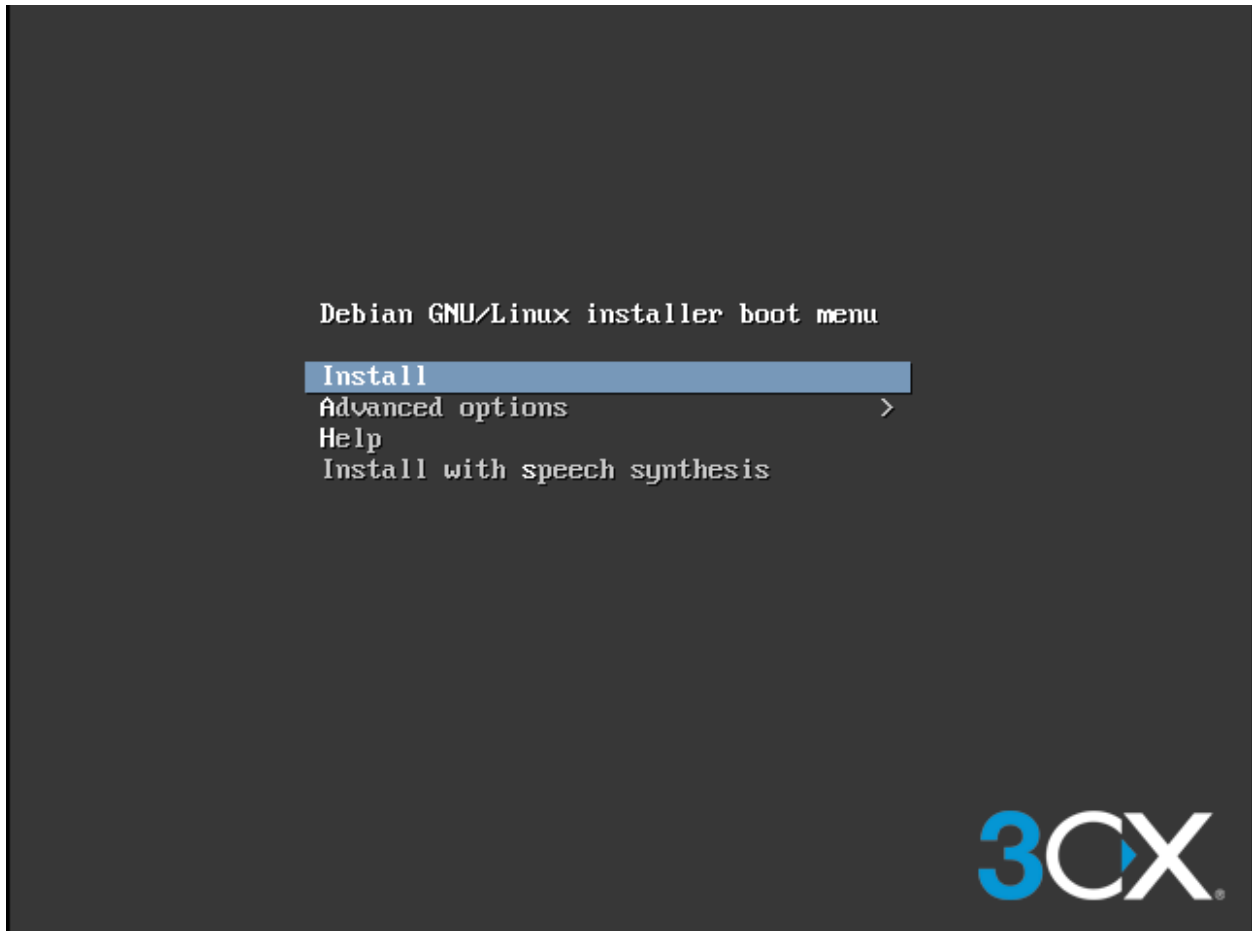

┤ [!] Configure the network ├

Please enter the hostname for this system.

The hostname is a single word that identifies your system to the network. If you don't know what your hostname should be, consult your network administrator. If you are setting up your own home network, you can make something up here.

Hostname:

3cx-sample_

     `<Go Back>`   `<Continue>`

                      Danish                 -  Dansk
                      Dutch                  -  Nederlands
                      English                -  English
                      Esperanto              -  Esperanto
                      Estonian               -  Eesti
                      Finnish                -  Suomi
                      French                 -  Français
                      Galician               -  Galego
                      German                 -  Deutsch
                      Greek                  -  Ελληνικά          ↓

      <Go Back>

<Tab> moves; <Space> selects; <Enter> activates buttons
```

```
                        ┤ [!!] Select your location ├

The selected location will be used to set your time zone and also for example to help
select the system locale. Normally this should be the country where you live.

This is a shortlist of locations based on the language you selected. Choose "other" if
your location is not listed.

Country, territory or area:

                        Antigua and Barbuda
                        Australia
                        Botswana
                        Canada
                        Hong Kong
                        India
                        Ireland
                        Israel
                        New Zealand
                        Nigeria
                        Philippines
                        Singapore
                        South Africa
                        United Kingdom
                        United States
                        Zambia
                        Zimbabwe
                        other

        <Go Back>

<Tab> moves; <Space> selects; <Enter> activates buttons
```
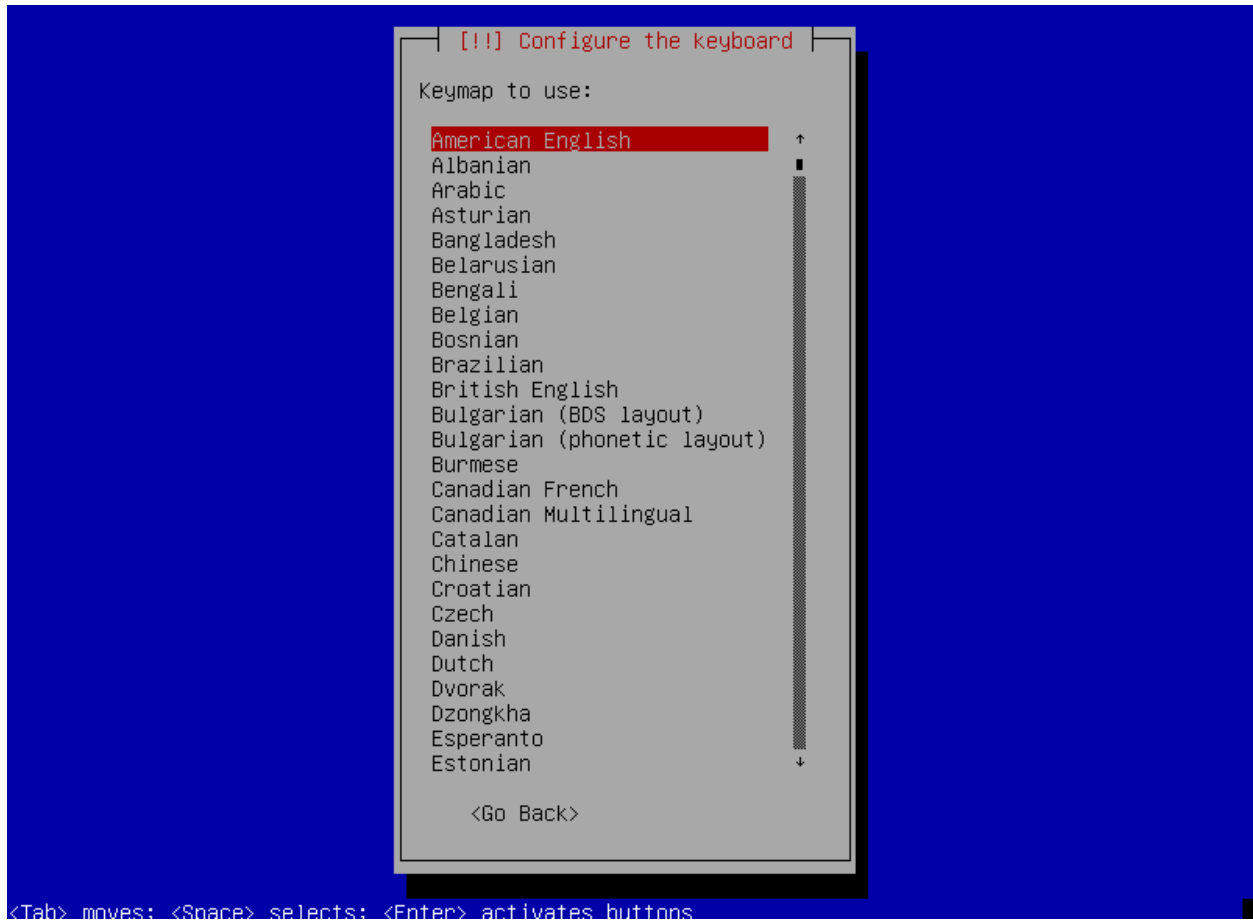

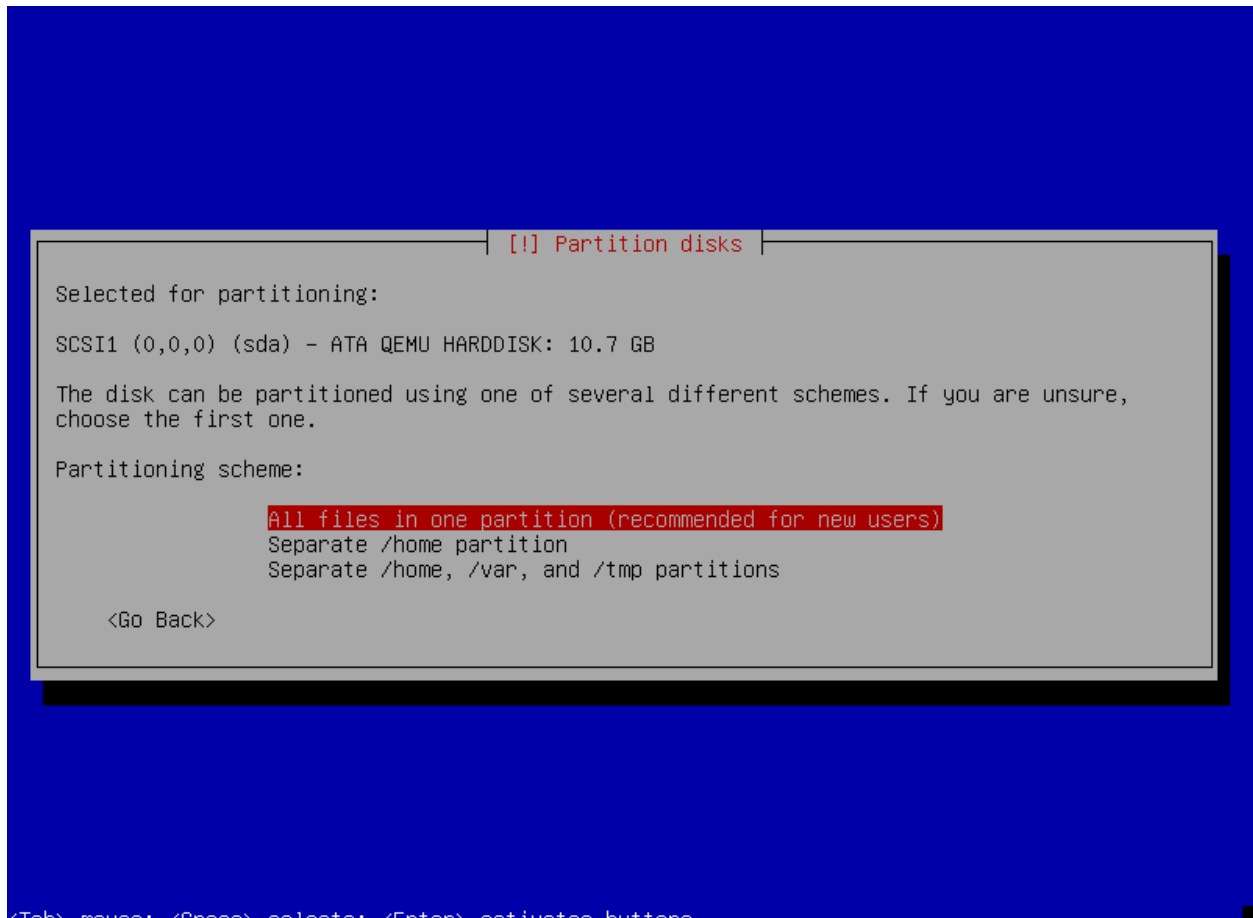

3CX Install with IP Auth SIP Trunk for QuestBlue

┤ [!!] Set up users and passwords ├

You need to set a password for 'root', the system administrative account. A malicious or unqualified user with root access can have disastrous results, so you should take care to choose a root password that is not easy to guess. It should not be a word found in dictionaries, or a word that could be easily associated with you.

A good password will contain a mixture of letters, numbers and punctuation and should be changed at regular intervals.

The root user should not have an empty password. If you leave this empty, the root account will be disabled and the system's initial user account will be given the power to become root using the "sudo" command.

Note that you will not be able to see the password as you type it.

Root password:

_____

[ ] Show Password in Clear

    <Go Back>   <Continue>

<Tab> moves; <Space> selects; <Enter> activates buttons

```
┤ [!!] Set up users and passwords ├

Please enter the same root password again to verify that you have typed it correctly.

Re-enter password to verify:

_____

[ ] Show Password in Clear

      <Go Back>                                        <Continue>
```

```
<Tab> moves; <Space> selects; <Enter> activates buttons
```
┤ [!] Configure the clock ├

If the desired time zone is not listed, then please go back to the step "Choose language"
and select a country that uses the desired time zone (the country where you live or are
located).

Select your time zone:

        Eastern
        Central
        Mountain
        Pacific
        Alaska
        Hawaii
        Arizona
        East Indiana
        Samoa

    <Go Back>

<Tab> moves; <Space> selects; <Enter> activates buttons

```
┤ [!!] Partition disks ├

The installer can guide you through partitioning a disk (using different standard
schemes) or, if you prefer, you can do it manually. With guided partitioning you will
still have a chance later to review and customise the results.

If you choose guided partitioning for an entire disk, you will next be asked which disk
should be used.

Partitioning method:

              Guided - use entire disk
              Guided - use entire disk and set up LVM
              Guided - use entire disk and set up encrypted LVM
              Manual

    <Go Back>
```

<Tab> moves; <Space> selects; <Enter> activates buttons

```
                          ┤ [!!] Partition disks ├

Note that all data on the disk you select will be erased, but not before you have
confirmed that you really want to make the changes.

Select disk to partition:

                    SCSI1 (0,0,0) (sda) - 10.7 GB ATA QEMU HARDDISK

       <Go Back>

<Tab> moves; <Space> selects; <Enter> activates buttons
```

```
                        ┤ [!] Partition disks ├

 Selected for partitioning:

 SCSI1 (0,0,0) (sda) - ATA QEMU HARDDISK: 10.7 GB

 The disk can be partitioned using one of several different schemes. If you are unsure,
 choose the first one.

 Partitioning scheme:

              All files in one partition (recommended for new users)
              Separate /home partition
              Separate /home, /var, and /tmp partitions

     <Go Back>
```

<Tab> moves; <Space> selects; <Enter> activates buttons

┤ [!!] Partition disks ├

This is an overview of your currently configured partitions and mount points. Select a
partition to modify its settings (file system, mount point, etc.), a free space to create
partitions, or a device to initialize its partition table.

        Guided partitioning
        Configure software RAID
        Configure the Logical Volume Manager
        Configure encrypted volumes
        Configure iSCSI volumes

        SCSI1 (0,0,0) (sda) — 10.7 GB ATA QEMU HARDDISK
            #1 primary 8.6 GB   f ext4   /
            #5 logical 2.1 GB   f swap   swap

        Undo changes to partitions
        Finish partitioning and write changes to disk

    <Go Back>

<F1> for help; <Tab> moves; <Space> selects; <Enter> activates buttons
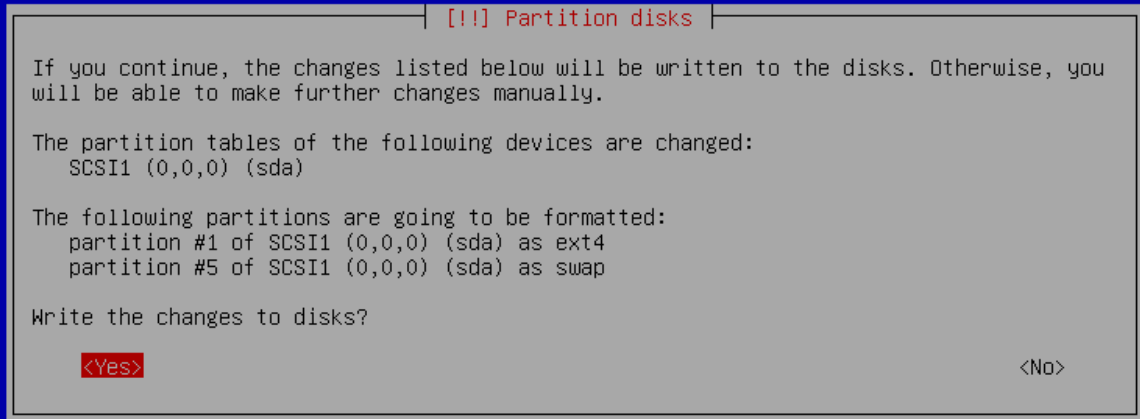

```
┤ [!!] Partition disks ├

If you continue, the changes listed below will be written to the disks. Otherwise, you
will be able to make further changes manually.

The partition tables of the following devices are changed:
    SCSI1 (0,0,0) (sda)

The following partitions are going to be formatted:
    partition #1 of SCSI1 (0,0,0) (sda) as ext4
    partition #5 of SCSI1 (0,0,0) (sda) as swap

Write the changes to disks?

    <Yes>                                                                    <No>
```

```
<Tab> moves; <Space> selects; <Enter> activates buttons
```

```
