Configure your QuestBlue under FusionPBX 4.5.14 using Freeswitch 1.10.3

The first step we need to allow all QuestBue IP in our FusionPBX go to **Advanced** > **Access Controls** > **domains**

One we get there under **Nodes** just select **ADD** and completed with each of our IP see below example:

One you completed your dashboard we look like this

Trunk

Go to **Accounts** > **Gateways** and select **ADD**,

New Gateway please fill out the following option

Gateway: **QB** (Write the gateway name to easily identify this trunk)
Proxy: **sbc.questblue.com**
Register: **False** (The option as default is true, please changed at false)

Also, before saving our new Questblue Sip Trunk we need to under **ADVANCED** select **Caller ID In From: True,** to make sure that we send the right outgoing caller id selected under each extension.
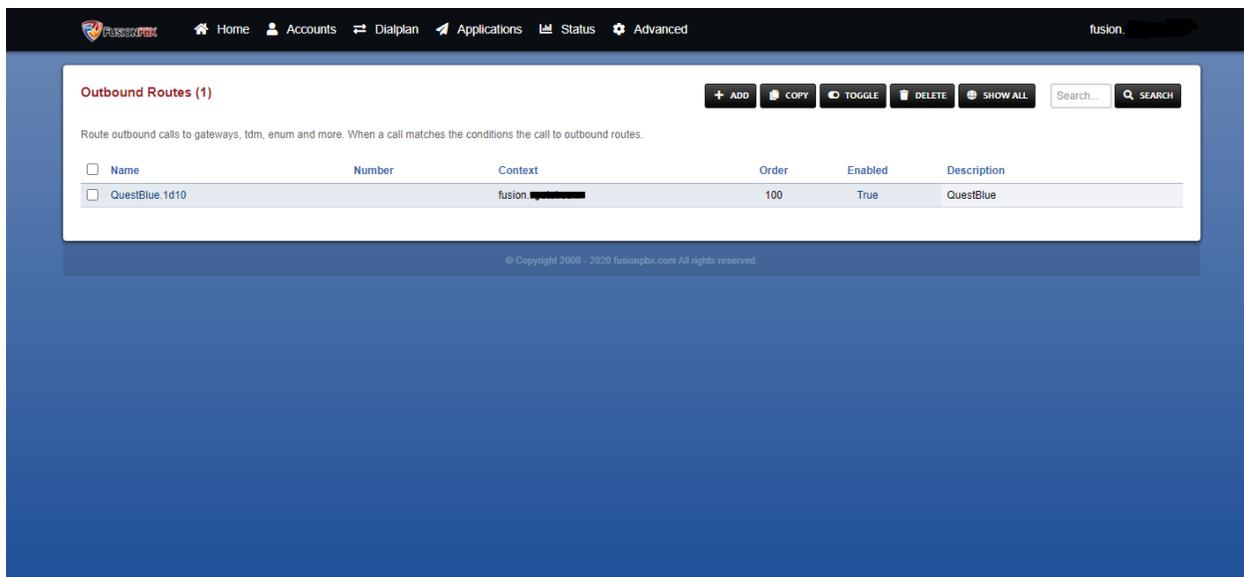

Routes

Now that we have the Sip Trunk configured, we need to set up our Outbound Calls

This option we can found under **Dialplan** > **Outbound Routes** select **ADD** to create a new Outbound dialplans.

Gateway: **QB** (Our just recently QuestBlue Gateway)
Dialplan Expression: North America, (Please don't forget to select each dialplan and configure your 911 as well)

Set up our Inbound Calls under **Dialplan** > **Destination** select **ADD** to create Inbound destinations.

Type: Inbound
Destination: (Number under our QuestBlue Dashboard)
Actions: (Select where the call will go after it enters your system)
Usage: (Destination used for that inbound number)
